

Twickenham Rugby Stadium.

Client:Willmott Dixon

Project Value:

Scope of Works

The electrical fit-out of the new East Stand development

Winters completed the design and build of the eighty million pound, east stand development. The new development includes five levels of space for parties, entertaining and dining, with an all new rooftop Rose Garden which has a built-in stage for live music performances. The updated stand also includes a space suited to conferences on level three, areas designed to accommodate meetings, also dinners and receptions with great views of the pitch. There are also more intimate spaces within the East Stand for high-end diners with terrace access for informal drinks and dining options. Winters Electrical were responsible for developing the electrical design to meet the clients requirements, and the complete installation of the electrical services, including lighting, power and lighting control. At times, Winters had around 100 electricians working on site.
